

2) Hostel Management System

Problem statement:

Manual hostel management involves a lot of confusion and difficulty in organisation and management of student records. So the proposed system involves a way to organise the rooms, mess and student records digitally.

The Use Case of the System are:

- The warden must be able to register for specific shifts during a week.
- The management should be able to add, edit, view and delete student personal details like name, age, gender, email, phone number and address.
- The management should be able to allot rooms to the students.
- Students should be able to view their own details.
- Students should be able to give feedback.
- Mess manager can update the menu list.
- Mess manager can review the mess feedback.
